

NEW YORK STATE  
DEPARTMENT OF TRANSPORTATION  
Materials Bureau  
"SAMPLING AND STOCK LOT CONTROL  
of  
PREFORMED ELASTIC JOINT SEALER"

I. INTRODUCTION

This method describes specific procedures for the SAMPLING AND STOCK LOT CONTROL of PREFORMED ELASTIC JOINT SEALER manufactured for Department projects. It encompasses an inventory control system whereby material is accepted in stock lots for eventual shipment to Department projects thereby eliminating the need for individual shipment inspection and jobsite sampling. This procedure benefits Department projects by assuring that acceptable material is available for incorporation into project work. The control system is implemented by sampling and testing material in stock lots as it is manufactured. After sampling and proper identification, thru the use of Department seals, the material is tested by the Department. If found acceptable, it is identified as such and released for shipment to Department projects as required.

II. DEFINITIONS

1. Manufacturer

A company actually engaged in the production of Preformed Elastic Joint Sealer at a given location.

2. Department

The New York State Department of Transportation.

3. Materials Bureau

A facility of the New York State Department of Transportation which may be contacted by mailing to:

Harry H. McLean,  
Director of Engineering Materials  
Lab. Bldg., 1220 Washington Avenue  
Bldg. #7, State Campus  
Albany, New York 12226

or

Telephoning the Product Control Office at:

Area Code 518 Number 457-5642

or

T.W.X. to: 710-441-88221  
N.Y.S. D.o.T., Albany Campus  
Materials Bureau, P.C.O.

4. Inspection Authority

An office designated by the Materials Bureau as responsible for inspection control on behalf of the Department at specific manufacturers.

5. Plant Inspector

An individual employed by the Inspection Authority and approved by the Materials Bureau to function on inspection assignments on behalf of the Department.

6. Project Inspector

An individual assigned by the Department's Project Engineer to function on inspection assignments at the project.

7. Preformed Elastic Joint Sealer, Joint Sealer or Sealer

Terms used to refer to any or all of the following preformed elastic joint sealers:

- a. Longitudinal Highway Joint Sealer.
- b. Transverse Highway Contraction Joint Sealer.
- c. 1 5/8 inch Highway Expansion Joint Sealer
- d. Bridge Joint Sealers.

8. Packaging Units

- a) Cartons made of durable material containing sealer wound in coils or on spools.
- b) Small Reels made of wood or metal and wound with sealer and encircled with a cardboard covering. The ends of the covering should be joined together with strong tape, or the covering may be secured in place with encircling metal bands.

Note: The term small reel describes a reel approximately four feet in diameter, three feet in width and should not be confused with a large

telephone cable reel of approximately eight feet diameter and five feet width.

- c) Telephone Cable Reels made of wood or metal and wound with sealer and encircled with a firmly banded cardboard cover.
- d) Pallets containing coils or lengths of sealer banded to the pallet with cardboard between the sealer and bands.

The maximum amount of sealer contained in/on each type of packaging unit is given in the table below.

Joint Sealer Type	Carton or Small Reel	Telephone Cable Reel	Pallet
Longitudinal Highway	1500'	Not Allowed*	Not Allowed*
Transverse Highway Contraction	600'	5000'	Not Allowed*
1 5/8 inch Highway Expansion	600'	5000'	Not Allowed*
Bridge	No Maximum	4000'	No Maximum

\* NOT ALLOWED - signifies packaging that cannot be used for that type of sealer.

#### 9. Lot

A lot shall consist of one specific size and style of preformed elastic joint sealer produced in a reasonably continuous manner and shall be made up of one or more carton(s) or small reel(s) of sealer

or

for Transverse Highway Contraction, Bridge, or 1 5/8" Highway Expansion Joint Sealer, one large telephone cable reel of sealer

or

for Bridge Sealer one or more pallets of sealer.

#### 10. Sample Frequency

The number of small reels or cartons (Packaging other than telephone cable reels or pallets) of joint sealer to be sampled for each lot is outlined in the following sample table:

Sampling TableLot Size  
(No. of Reels  
or cartons)Number of Units  
SampledLot rejection will  
occur when the number  
of sample failures  
equal or exceeds

1-50	5 (See Note 2)	1
51-150	20	2
151-280	32	3
281-500	50	4

Note 1: When telephone cable reels or pallets are used for packaging, the rate of sampling is given under the definition of "Sample Size" below.

Note 2: When the number of units to be sampled exceeds the lot size, sample all units in the lot.

11. Sample Size

The quantity of sealer cut from each unit selected for sampling is shown in the following table:

Joint Sealer Type	Carton or Small Reel	Telephone Cable Reel	Pallet
Longitudinal	* 5' - 9' lengths	Not Applicable	Not Applicable
Transverse Highway Contraction	9'	2 - 9 foot lengths; one from each end of the sealer	Not Applicable
1 5/8 in. Highway Expansion	9'	2 - 9 foot lengths	Not Applicable
Bridge	3'	3'	3' for Pallets containing 120' or less. 15 additional inches when more than 120'

12. Manufacturer's Extrusion Mark

A manufacturer's identification mark extruded on all joint seal produced for Department use. This mark must be registered with the Rubber Manufacturers Association Inc. or with the Materials Bureau.

13. Seals

Tape and metal devices, as described below, to insure content security of packages of Preformed Elastic Joint Sealer. These seals are furnished to the Inspector by the Department.

a. Red Tape Seal

A red tamper proof tape seal imprinted "N.Y.S. SAMPLED".

b. Green Tape Seal

A green tamper proof tape seal imprinted "N.Y.S. ACCEPTED".

c. Red Metal Seal

A red metal tamper proof seal imprinted "N.Y.S. SAMPLED".

d. Green Metal Seal

A green metal tamper proof seal imprinted "N.Y.S. ACCEPTED".

14. Forms

The following forms are published and issued by the Department for use by the Materials Bureau and Inspection Authorities.

a. BR-240, Sample and Acceptance Transmittal

This form transmits the Inspector's sample information to the Materials Bureau and upon validation conveys acceptance action to the Inspector. Detailed instructions for proper completion and transmittal are contained in Materials Method 18.1.

b. BR-241, Transmittal Envelope

This is a heavy duty envelope used to contain the form BR-240.

## III. EVIDENCE OF ACCEPTABILITY

1. At Manufacturing Plant

A green copy of Form BR-240 in the possession of the Inspector, properly noted with the word "accepted" and validated by the Materials Bureau.

2. At Project Location

## a. Each package sealed as follows:

(1) Carton

Four red tape seals, two sealing the top and two sealing the bottom of the carton and two green tape seals affixed to the side of the carton containing the labelling information.

(2) Small Reel

Two red and two green tape seals securing the ends of the encircling cardboard covering, or if metal bands are used to hold the cover in place, one red and one green tape seal across each metal band securing the band to the cardboard covering.

(3) Telephone Cable Reel

One red and one green tape seal across each metal band sealing the band to the cardboard covering.

(4) Pallet

Two red and two green tape seals across the metal bands sealing the band to the cardboard covering.

## b. The lot number imprinted on the joint sealer.

## c. Presence of the following identifying information on all cartons, reels or pallets:

- (1) Size and style of sealer as shown on the appropriate Standard Sheet or Bridge Design Sheet.
- (2) N.Y.S. D.o.T. Material Designation.
- (3) Lot Number
- (4) Test Number
- (5) Acceptance Date
- (6) Date of Manufacture
- (7) Footage contained in the packaging unit.
- (8) Manufacturer's name and address

Generally this information may be found in the following locations:

(1) Cartons and Reels

Printed on the side

(2) Pallets

Printed on the cardboard placed between the joint sealer and the metal bands.

IV. STEPS IN PROCEDURE

Part A - Sampling and Stock Lot Control of Cartons and Small Reels of Sealer.

Part B - Sampling and Stock Lot Control of Telephone Cable Reels of Sealer.

Part C - Sampling and Stock Lot Control of Pallets of Sealer.

A. SAMPLING AND STOCK LOT CONTROL OF CARTONS AND SMALL REELS OF SEALER

<u>Responsibility</u>	<u>Action</u>
Manufacturer	<ol style="list-style-type: none"><li>1. Assigns a lot number to the sealer to be produced.<ol style="list-style-type: none"><li>a. Lot numbers are assigned to each lot offered for Department work, regardless of type or item, in a series starting at the beginning of each calendar year.</li></ol></li><li>2. Produces the required sealer.<ol style="list-style-type: none"><li>a. All sealer produced must contain the Manufacturer's extrusion mark in the sealer and the lot number printed indelibly on the sealer at no less than three foot intervals.</li></ol></li><li>3. Packages the sealer in cartons or on small reels as described under definition Packaging Unit on page <u>N6.2</u>.</li></ol>

STEPS IN PROCEDURE (continued)

<u>Responsibility</u>	<u>Action</u>
	4. Labels the side of each unit indelibly with the following information: <ul style="list-style-type: none"><li>a. Size and Style of sealer, as shown on appropriate Standard sheet or Bridge Design sheet.</li><li>b. N.Y.S. D.o.T. Materials Designation.</li><li>c. Lot Number</li><li>d. Date of Manufacturer</li><li>e. Footage contained in the packaged unit.</li><li>f. Manufacturer's name and address</li></ul>
	5. Stores the material in an easily accessible location.
	6. Notifies the Inspection Authority designated by the Department that a lot of material is ready for sampling.
Inspection Authority	7. Schedules an inspection call.
	8. Assigns an Inspector to make a call.
Plant Inspector	9. Ascertains that the material is stored in an accessible location.
	10. Determines that the sealer is packaged according to the definitions of Lot and Packaging Unit on page No(s) <u>2 &amp; 3</u> .
	11. Determines that each unit is labeled as described in step 4 above.
	12. Counts the number of units in the lot.
	13. Consults the term Sample Frequency under definitions on page No. <u>3</u> to determine the number of units to be sampled.

STEPS IN PROCEDURE (continued)

<u>Responsibility</u>	<u>Action</u>
Plant Inspector (cont'd.)	14. Numbers each unit by actually marking each, or by mentally designating a number to each.
	15. Consults the random number table for the numbers of the units to be sampled. The table and instructions for its use are on page No. <u>18</u> .
	16. Designates the units to be sampled.
Manufacturer	17. Removes from storage and unwraps the designated units.
Plant Inspector	18. Cuts a nine foot sample from each unit of highway sealer selected or a three foot sample from each unit of bridge sealer selected.  a. The sample shall be cut from the end of the coil, spool or reel of sealer.
	19. Marks each sample indelibly with the manufacturer's name and the date of manufacture of the unit from which the sample was cut.
	20. Supervises the repackaging of the sampled units.
	21. Seals each unit in the lot by applying the following seals:  a. Cartons - Two red tape seals to the top and two red tape seals to the bottom of each carton.  b. Small Reels - Two red tape seals securing the ends of the encircling cardboard covering, or if metal bands are used to hold the cover in place, one red tape seal across each metal band securing the band to the cardboard cover.

STEPS IN PROCEDURE (continued)

<u>Responsibility</u>	<u>Action</u>
Plant Inspector (cont'd.)	22. Completes Form BR-240 according to Materials Method N.Y. 18.1. Includes in Box #16 the following: <ul style="list-style-type: none"><li>a. Size and Style of sealer.</li><li>b. Number of units in the lot.</li><li>c. Number of units sampled.</li></ul>
	23. Packages samples, includes Form BR-240 enclosed in BR-241 envelope and forwards to the Materials Bureau. <ul style="list-style-type: none"><li>a. If transmitted by means not authorized by the Materials Bureau, such as air freight, expense must be borne by the manufacturer.</li><li>b. If samples are transmitted by the manufacturer, box #16 of the BR-240 shall be noted, "Sample sent by Manufacturer" and each piece of the sample must be sealed by the Inspector, using a red metal seal on a wire passing through a hole punched in each piece.</li></ul>
	24. Makes the necessary entries in his records as to manufacturer, product type, material designation, date sampled, etc.
	25. Transmits the samples for testing to the Materials Bureau.
Materials Bureau	26. Performs required tests and accepts or rejects the lot on the basis of test results.
	27. Indicates action on and validates Form BR-240.
	28. Issues green and yellow copies of Form BR-240 to Inspection Authority. <ul style="list-style-type: none"><li>a. Telephone requests to the Materials Bureau, in advance of normal notification of action, will be honored only when received from the Inspector.</li></ul>

STEPS IN PROCEDURE (continued)

<u>Responsibility</u>	<u>Action</u>
Inspection Authority	29. Receives green and yellow copies of Form BR-240, marked accepted or rejected and validated, from the Materials Bureau.
	30. Retains the yellow copy and advances the green copy of Form BR-240 to the Inspector.
	31. Notifies the manufacturer of action taken by the Materials Bureau and provides acceptance information for completion of labeling.  a. If the material is REJECTED: on a subsequent routine visit to the plant, the Inspector will remove all <u>red</u> tape seals from the units of the rejected lot.
	32. Arranges for an Inspection call to check labeling and seal acceptable units.
Plant Inspector	33. Checks that the manufacturer has indelibly labeled each unit with the test number and the date of acceptance.  NOTE: At the manufacturers convenience, labeling may be accomplished previous to or coincident with the application of green seals.
	34. Applies green tape seals to each unit as follows:  a. Cartons - two green tape seals to the side of the carton containing the labeling.  b. Small Reels - two green tape seals securing the ends of the encircling cardboard covering, or if metal bands are used to hold the covering in place, one green tape seal across each metal band securing the band to the cardboard covering.

STEPS IN PROCEDURE (continued)

<u>Responsibility</u>	<u>Action</u>
Manufacturer	35. Makes shipments from the accepted lot without further documentation or supervision of the Inspector.
	36. Maintains a record of shipments of all Department accepted material. These records should include Department's material designation, test number, lot number, quantities shipped and shipping destination.
	37. Provides shipment record to the Department upon request.
Project Inspector	38. Satisfies himself that the required seals, as described under "Evidence of Acceptability," on page <u>5</u> are intact on each unit.
	39. Consults MURK for additional information concerning acceptances.

B. SAMPLING AND STOCK LOT CONTROL OF TELEPHONE CABLE REELS OF SEALER.

FOR THIS PROCEDURE FOLLOW ALL STEPS GIVEN IN PROCEDURE A, "STOCK LOT CONTROL OF CARTONS, AND SMALL REELS OF SEALER" EXCEPT FOR THE STEPS INDICATED AS REPLACED BY THE STEPS GIVEN BELOW.

1. Packaging by the Manufacturer of Joint Sealer on Cable Reels (Replaces Step 3 of Procedure A.)

The Manufacturer may elect to package Transverse Highway Joint Sealer or Bridge Joint Sealer on telephone cable reels in accordance with the definition 8c "Packaging Unit - Telephone Cable Reel" found on page No. 3. When packaging Transverse Highway Sealer enough sealer must be threaded through a hole in the center of the reel to allow the Inspector to take a nine foot sample.

The end of the length of joint sealer on the reel may pass between the cardboard covering and the edge of the reel to facilitate taking a sample without removing the cardboard covering.

STEPS IN PROCEDURE (continued)

The amount of Bridge Sealer allowed on one reel shall not exceed eight hours of continuous production.

The only natural breaks allowed in a reel of Bridge Sealer shall be quantity control breaks.

2. Labeling of Cable Reels of Joint Sealer by the Manufacturer (Replaces Step 4 of Procedure A)

The side of each reel shall be indelibly labeled with the following information:

- a. Size and Style of sealer, as shown on appropriate Standard sheet or Bridge Design sheet.
- b. N.Y.S. D.o.T. Materials Designation
- c. Lot Number
- d. Date of Manufacture
- e. Footage contained on the reel.
- f. Manufacturer's name and address.

3. Sampling Cable Reels of Joint Sealer by the Plant Inspector (Replaces Steps 13 through 18, 22b, and 22c)

Transverse Highway Joint Sealer shall be sampled by cutting two nine-foot lengths, one from the end of joint sealer threaded through the center of the reel and the second from the other end of the joint sealer on the reel.

Bridge Joint Sealer shall be sampled by securing a three foot sample from the end of sealer on the reel.

Each cable reel of joint sealer shall be sampled as a separate lot. In the case where two reels have the same lot number, they should be distinguished by the reel number. Form BR-240 shall be executed for each reel and should include both the lot and reel number.

All unwrapping or rewinding of the reel shall be done by the manufacturer under direction of the Inspector. The manufacturer shall also provide any aid necessary for the Inspector in securing the sample(s).

4. Security Sealing Sampled Cable Reels of Joint Sealer by the Plant Inspector (Replaces Step 21 of Procedure A)

One red tape seal shall be placed across each metal band

STEPS IN PROCEDURE (continued)

securing the band to the cardboard covering. Any end of joint sealer not secured by the cardboard covering shall be secured by attaching a red metal seal to a sealing wire passing through a hole in the end of the joint sealer.

5. Security Sealing and Labeling Accepted Cable Reels of Joint Sealer (Replaces Steps 33 and 34 of Procedure A.).

The Plant Inspector shall secure accepted reel(s) by placing one green tape seal across each metal band, securing the band to the cardboard covering. At this time, the Inspector shall supervise the manufacturer in labeling the side of the reel with the test number and date of acceptance.

6. Shipment of Cable Reels of Transverse Highway Joint Sealer by the Manufacturer (Replaces Step 35).

After application of green tape seals accepted reel of Transverse Highway Joint Sealer may be shipped to a supply location or Department project without supervision by the Plant Inspector. Any transfer of reels between projects will be handled at the project level as covered under "Manual For Uniform Reported Keeping" (M.U.R.K.).

7. The Repackaging of Cable Reels of Bridge Sealer at the Manufacturer's Plant (Replaces Step 35).

After application of the green tape seals accepted reels of bridge sealer may be shipped to supply location or Department project without further inspection, or the reels of Bridge sealer may be repackaged into cartons under the supervision of the Plant Inspector. The cartons shall be labeled by the manufacturer and sealed by the Inspector as described under Procedure A, "Stock Lot Control of Cartons and Small Reels of Sealer".

During the repackaging operation check samples shall be taken from the sealer on the reel as follows:

1. At the first repackaging operation from any material left on the reel.
2. At any natural breaks in the sealer which may occur during later repackaging operations.

Note: Natural breaks are those resulting from Quantity Control samples taken by the manufacturer.

STEPS IN PROCEDURE (continued)

After each repackaging operation, if any sealer remains on the reel, the reel shall be repackaged and resealed with red and green tape seals as described in earlier parts of section.

Any Bridge Sealer repackaged into cartons or any resealed cable reels of Bridge Sealer may be shipped by the manufacturer without the presence of the Plant Inspector.

C. SAMPLING AND STOCK LOT CONTROL OF PALLETS OF SEALER.

FOR THIS PROCEDURE FOLLOW ALL STEPS GIVEN IN PROCEDURE A. "STOCK LOT CONTROL OF CARTONS AND SMALL REELS OF SEALER" EXCEPT FOR THE STEPS INDICATED AS REPLACED BY THE STEPS GIVEN BELOW.

1. Packaging by the Manufacturer of Sealer on Pallets  
(Replaces Step 3 of Procedure A.).

The manufacturer may elect to package bridge sealer on pallets in accordance with definition 8d, "Packaging Unit-Pallet" found on page No. 3. When banding the sealer to pallets enough cardboard material should be placed between the bands and the sealer to prevent the bands from cutting the sealer.

2. Labeling by the Manufacturer of Pallets of Sealer  
(Replaces Step 4 of Procedure A.).

The following information shall be printed indelibly on the cardboard placed between the bands and sealer:

- a. Size and Style of sealer, as shown on appropriate Standard Sheet or Bridge Design Sheet.
- b. N.Y.S. D.o.T., Materials Designation.
- c. Lot Number
- d. Date of Manufacturer
- e. Footage contained on the pallet.
- f. Manufacturer's name and address.

3. Sampling of Pallets of Sealer by the Plant Inspector  
(Replaces Steps 13 through 18, 22b and 22c of Procedure A.).

Each pallet of Bridge Sealer shall be sampled as follows:

STEPS IN PROCEDURES (continued)

a. Pallets Containing 120 Feet or Less of Sealer.

Three feet of sealer shall be cut from the end of a length of sealer.

b. Pallets Containing More than 120 Feet of Sealer.

Three feet of sealer shall be cut from the end of a length of sealer and fifteen additional inches from the end of another length or if the pallet contains only one piece of sealer, from the end of sealer not previously sampled.

When submitting the samples to the Materials Bureau the accompanying Form BR-240 shall be noted with the number of pallets sampled and the amounts sampled from each pallet.

4. Application by the Plant Inspector of Security Seals to Sampled Pallets of Sealer (Replaces Step 21 of Procedure A.)

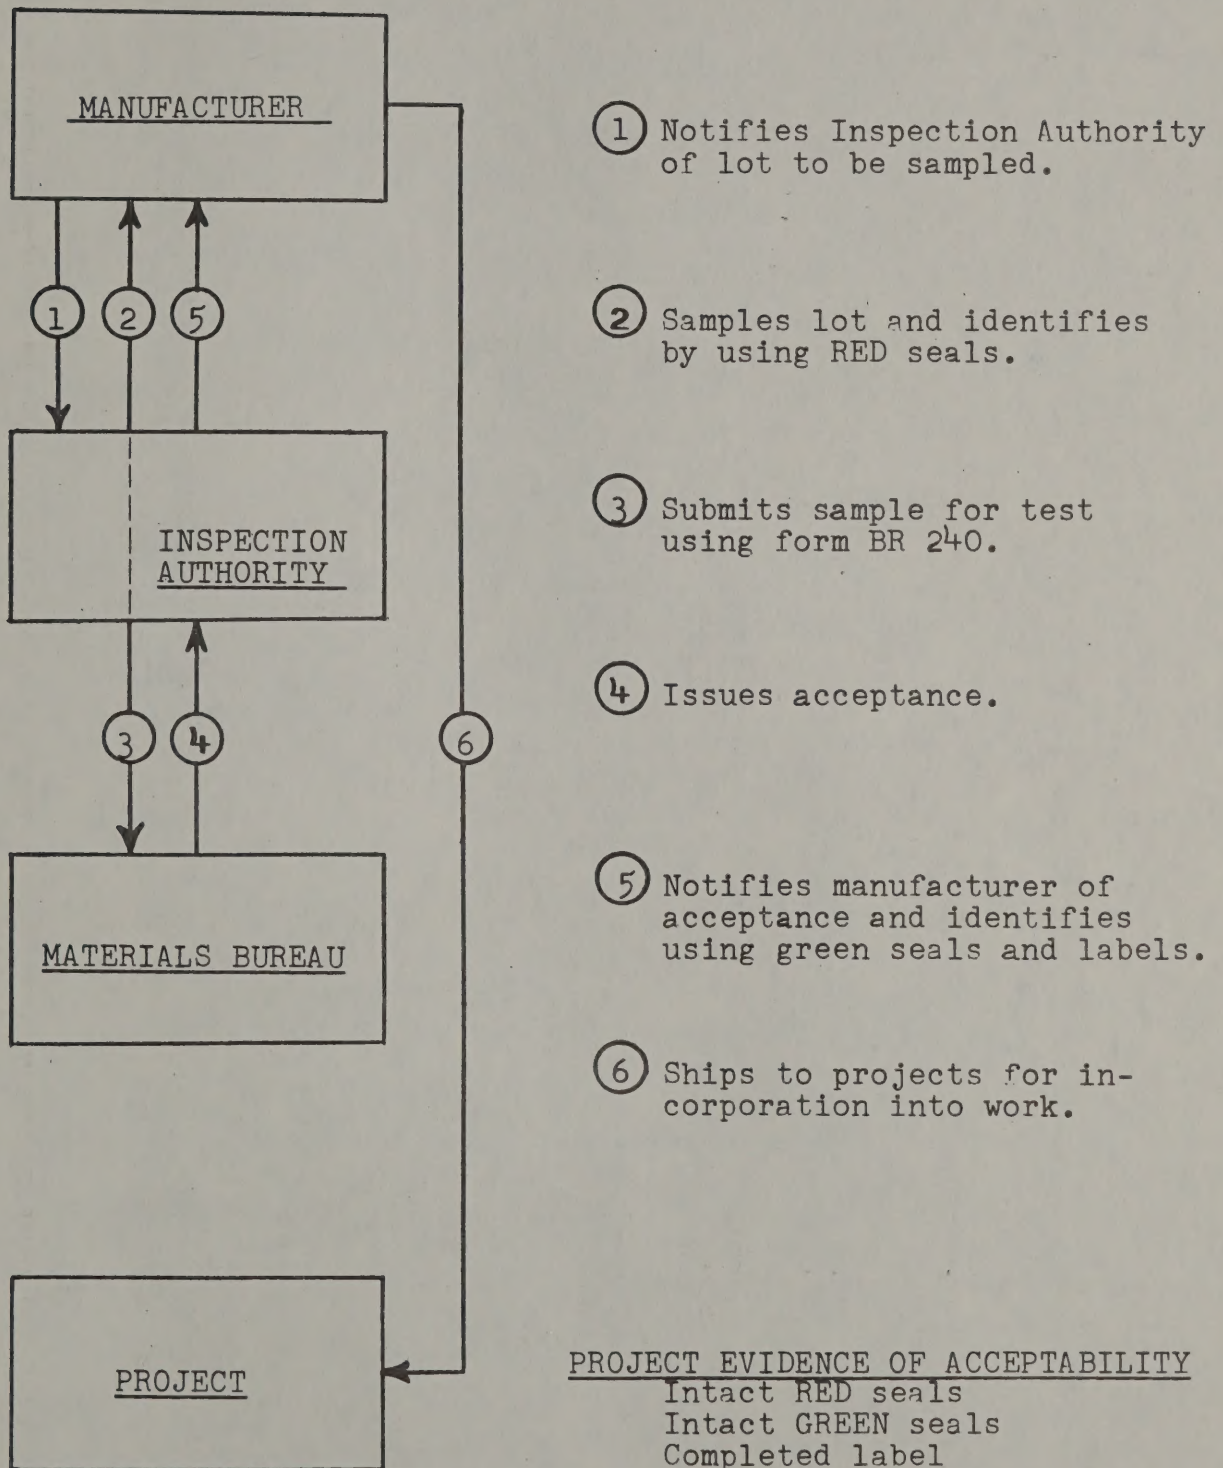

Each pallet shall be secured by applying two red tape seals across the metal bands which hold the joint sealer on the pallet. The seal shall cross the band securing the band to the cardboard underneath.

5. Application of Security Seals and Completion of Labeling of Accepted Pallets of Sealer (Replaces Steps 33 and 34 of Procedure A.).

The Plant Inspector shall secure pallets of accepted sealer by affixing green tape seals in the same manner as described for applying red tape seals. The Plant's Inspector shall also supervise the manufacturer in labeling the cardboard covering with the test number and date of acceptance.

FLOW CHART  
 PREFORMED ELASTIC JOINT SEALER  
 INSPECTION

## INSTRUCTIONS:

1. Determine number of digits to be used that correspond with number of units to be sampled. (e.g. 500 units - use last three digits of each number in the table - 9685)

2. Starting anywhere in the table, select the units to be sampled by reading the numbers consecutively that do not exceed total number of units in the lot.

(EXAMPLE - 500 units to be sampled with 5 samples needed. Presume you start on line 27, column 3 (#685). Since 685 is larger than the number of units in lot, go down col. 3 selecting numbers 64, 32, 187, 37 and 110. When counting units in lot, those units corresponding to these numbers would be sampled.)

RANDOM NUMBER TABLE
